

British Gas/Trinidad

15 kVA Parallel AC UPS

20 year Life Batteries

BG T&T is an established company in Trinidad and Tobago. This company supplies natural gas for domestic use and also liquefaction and export. BG Trinidad & Tobago has been operating in the region since 1989. It has 50 per cent equity in the Dolphin field, off the east coast of Trinidad and supplies up to 264 million cubic feet of gas per day to the National Gas Company of Trinidad and Tobago under a 20 year supply contract.

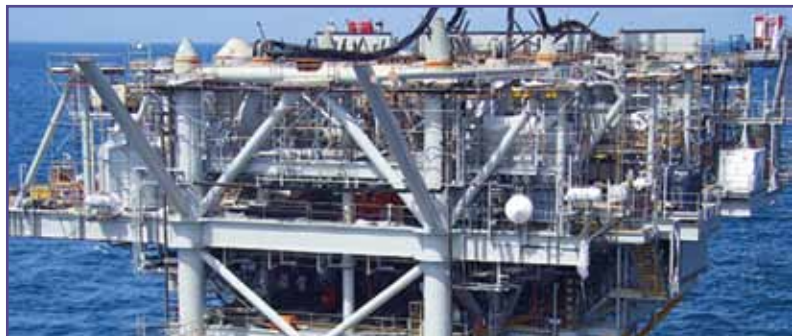

In 2005 British Gas approached Harland Simon UPS Ltd. to replace the old UPS system with a modular marine certified UPS with long life batteries to provide increased power, all to fit within the very limited space available.

We designed 3 x 15 kVA parallel marinised custom built AC UPS systems complete with 20 year life batteries, transformers and switchgear to replace the old faulty UPS.

"Replacing the old system, and fitting our replacement UPS into the limited space was a challenge, however we also performed factory witness testing and site commissioning with a rig-ready engineer, all to the customer's satisfaction."
Andy Parfitt, Sales Director HSUPS.
